Ultimate Terrain Europe With Aerosoft/SimWings Almeria

What This Patch Provides

At this time, a patch is not seen as necessary between UT Europe and the Almeria product.

There will be very few conflicts between the two products.   The roads in the Almeria product will not line up exactly with the UT Europe roads at the boundaries of the Almeria coverage area.   Also, there is a little bit of climbing ocean water near the airport, due to the enlarged width of the flattened airport.   Other than these two things, the scenery products work well together.

FS2004 Scenery Library

We recommend putting the Almeria scenery layers ABOVE the "Utimate Terrain – Europe 3" entry in the scenery library. This will insure that the local landclass from Almeria will be displayed.   The Almeria product also contains some exclusions that will allow the Almeria roads to be used instead of UT's Roads.   While the UT roads are more numerous, detailed and accurate, the roads in the Almeria product will work better with the positioned static scenery objects in the Almeria package.
