

# **Ultimate Terrain Europe With Lago's Bologna For FS2004**

## **What This Patch Provides**

At this time, a patch is not necessary between UT Europe and Lago's Bologna product. However, there are some things you can do in the FS2004 Scenery Library if do not want to use the photographic portion of the Bologna scenery.

## **Disable The Photographic Scenery Portion Of Bologna**

Using the FS2004 Scenery Library, you can choose whether or not to have the photographic scenery portion of Lago's Bologna displayed. You can disable the photographic scenery portion and still have all the objects + detailed airports displayed from the Bologna scenery.

To disable the photographic scenery using the FS2004 Scenery Library (our recommended setting):

- Give the scenery area labeled "Ultimate Terrain – Europe 4" a higher priority than the "Bologna Scenery" layer.

To enable the photographic scenery using the FS2004 Scenery Library:

- Give the scenery area labeled "Bologna Scenery" layer a higher priority than the layer "Ultimate Terrain – Europe 4".

Most users will probably find a better blending of products with the photographic airport scenery turned off. But, you do have a choice.

## **Patch Updates**

To check for patch updates, or for additional patches, please visit the Ultimate Terrain Compatibility website at the link below:
