

Ultimate Terrain Europe With Lago's Turin For FS2004

What This Patch Provides

At this time, a patch is not necessary between UT Europe and Lago's Turin product. However, there are some things you can do in the FS2004 Scenery Library if do not want to use the photographic portion of the Turin scenery.

Disable The Photographic Scenery Portion Of Turin

Using the FS2004 Scenery Library, you can choose whether or not to have the photographic scenery portion of Lago's Turin displayed. You can disable the photographic scenery portion, and still have all the objects and detailed airports displayed from the Turin scenery.

To disable the photographic scenery using the FS2004 Scenery Library (our recommended setting):

- Give the scenery area labeled "Ultimate Terrain – Europe 5" a higher priority than the "Turin Scenery" layer.

To enable the photographic scenery using the FS2004 Scenery Library:

- Give the scenery area labeled "Turin Scenery" a higher priority than the layer "Ultimate Terrain – Europe 5".

Patch Updates

To check for patch updates, or for additional patches, please visit the Ultimate Terrain Compatibility website at the link below:
